

Christopher Musco

32 Vassar Street – Cambridge, MA 02139 – Office G578

☎ (401) 578 2541 • ✉ cpmusco@mit.edu

Education

Massachusetts Institute of Technology

Ph.D. Candidate, Computer Science – Theory of Computation

Advisors: Jonathan Kelner, Martin Rinard

S.M. Thesis: Dimensionality Reduction for Sparse and Structured Matrices (Spring 2015)

Cambridge, MA

2013 – present

Yale University

B.S. Applied Mathematics, B.S. Computer Science

Applied Mathematics Thesis: Fast Discrete Laplace Transforms (under Vladimir Rokhlin)

Computer Science Thesis: Graph Constructions for Machine Learning (under Daniel Spielman)

New Haven, CT

2008 – 2012

Other Academic Positions

Yahoo Labs

Research Intern, Scalable Machine Learning Group

Mentors: Justin Thaler, Maxim Srividenko, Edo Liberty

Worked on theoretical matrix sampling problems and on algorithms for managing Yahoo's Fantasy Sports platform.

New York, NY

Summer 2015

Research Areas

theory of algorithms ◦ machine learning ◦ randomized numerical linear algebra ◦ low rank approximation
dimensionality reduction ◦ sketching and streaming ◦ algorithmic graph theory ◦ iterative matrix algorithms

Publications

Authors appear in alphabetical order, in the tradition of mathematics and theoretical computer science.

Conference Papers.....

[Randomized Block Krylov Methods for Stronger and Faster Approximate Singular Value Decomposition.](#)

Cameron Musco, Christopher Musco. *NIPS* 2015. Invited for full oral presentation (1 of 15 out of 403 accepted papers).

[Dimensionality Reduction for K-Means Clustering and Low Rank Approximation.](#) Michael B. Cohen, Samuel Elder, Cameron Musco, Christopher Musco, Madalina Persu. *STOC* 2015.

[Principled Sampling for Anomaly Detection.](#) Brendan Juba, Fan Long, Christopher Musco, Stelios Sidiropoulos-Douskos, Martin Rinard. *NDSS* 2015.

[Uniform Sampling for Matrix Approximation.](#) Michael B. Cohen, Yin Tat Lee, Cameron Musco, Christopher Musco, Richard Peng, Aaron Sidford. *ITCS* 2015.

[Single Pass Spectral Sparsification in Dynamic Streams.](#) Michael Kapralov, Yin Tat Lee, Cameron Musco, Christopher Musco, Aaron Sidford. *FOCS* 2014. Invited to SICOMP Special Issue.

Other.....

[Ridge Leverage Scores for Low-Rank Approximation.](#) Michael B. Cohen, Cameron Musco, Christopher Musco. *In submission.*

[Determining Tournament Payout Structures for Daily Fantasy Sports.](#) Christopher Musco, Maxim Sviridenko, Justin Thaler. *In submission.*

Talks

Large Scale Column Subset Selection

Yahoo Labs, Science Week Poster Session

July 2015

Dimensionality Reduction for K-Means Clustering

IBM T.J. Watson, Research Seminar

Aug. 2015

Symposium on Theory of Computing (STOC)

June 2015

MIT, Theory Lunch

June 2014

Principled Sampling for Anomaly Detection

MIT, Defense Advanced Research Projects Agency Site Visit

Mar. 2015

Network and Distributed System Security Symposium (NDSS)

Feb. 2015

Uniform Sampling for Matrix Approximation

Yahoo Labs, Scalable Machine Learning Research Seminar

June 2015

Single Pass Spectral Sparsification in Dynamic Streams

MIT, Annual Sublinear Algorithms Day (Poster Session)

Apr. 2015

Harvard University, Theory Seminar

Nov. 2014

Foundations of Computer Science (FOCS)

Oct. 2014

Teaching and Mentorship

Massachusetts Institute of Technology

2015 – present

Communication Advisor

Hired to help establish an EECS Communication Lab to provided over 700 graduate students with support in academic writing, oral presentation, job applications, and generally, in communicating effectively.

- Offer feedback, guidance, and coaching to individual students during weekly office hours.
- Organize outreach initiatives to increase awareness and utilization of the Communication Lab.

Research Science Institute at MIT

2014

Summer Research Advisor

Mentored Christopher Wang, a high school student participating in the prestigious RSI summer program.

- Designed a project on concurrent data structures under the direction of Professor Martin Rinard.
- Chris' paper, "Relaxation of a Concurrent Disjoint-Set", was selected as one of 10 program finalists.

Yale University

Teaching Assistant, Introduction to Computer Science

2012

Covered functional programming, boolean algebra, formal language theory, and basic complexity theory.

Teaching Assistant, Introduction to Programming

2011

Led weekly section for 15-25 students covering basic Java programming. Tutored 5-6 students individually.

Undergraduate Grader, Introductory Calculus

2009 – 2010

Scored problem sets and provided explanations and solutions for students, as well as feedback to the professor.

Service

External Reviewer

Symposium on Discrete Algorithms (SODA)

2016

IEEE Transactions on Signal Processing

2015

Neural Information Processing Systems (NIPS)

2015

European Symposia on Algorithms (ESA)

2015

Foundations of Computer Science (FOCS)

2015

International Colloquium on Automata, Languages and Programming (ICALP)	2015
Network and Distributed System Security Symposium (NDSS)	2015

Honors and Awards

Japan National Institute of Informatics <i>Invited participant at "Recent Advances in Randomized Numerical Linear Algebra" meeting.</i>	2015
National Science Foundation <i>Graduate Research Fellowship.</i>	2014
Yale University <i>Cum Laude, Distinction in Both Majors.</i>	2012

Professional Experience

Redfin <i>Software Engineer, Data Team</i> Developed backend Java infrastructure for internet-powered real estate startup. Incorporated large-scale machine learning algorithms into production code. Managed three interns and onboarded four new-hires.	Seattle, WA 2012 – 2014
Elysium Digital <i>Summer Consultant</i> Provided technical expertise in software patent cases at leading litigation consulting company.	Cambridge, MA Summer 2011
Amicus <i>Software Developer</i> Built tools for political campaign management and social fundraising at early-stage startup that went on to raise nearly \$4 million in seed funding.	New Haven, CT 2010 – 2011
Moody's Investors Service <i>Intern, Asset Finance Group</i> Established and monitored bond ratings on securitizations in three asset classes. Wrote code to automate analysis for student loan data and to compile records on aircraft leases.	New York, NY Summer 2009
U.S. Department of Agriculture <i>Intern, Natural Resources Conservation Service</i> Collected and analyzed data for two major state conservation and research projects. Integrated mapping software and database tools to develop a system for compiling and presenting soil data.	East Greenwich, RI Summer 2007
